SUMMARY

A solution-driven full-stack web developer with a detailed approach to work. I have 6 years of experience in creating consumer-focused websites and applications using object oriented PHP, database manipulation and front end technologies. Proficient in integrating third-party APIs depending on project requirements. Committed to high standards of user experience, usability and speed, implementing projects with pixel perfect precision and responsiveness.

Experience with creating email templates that look good and work within vendor limitations.

Worked as a backend developer with a multinational team on a large application involving complex logic and maintenance.

EDUCATION

Bachelor of Science in Computer Science - University Goce Delcev, Stip, North Macedonia

TOP SKILLS

- PHP
- Laravel
- JavaScript
- Vue.js
- MySql

ROLES

- Full-stack developer

INDUSTRY EXPERIENCE

- SaaS
- Culture
- IT
- Automotive
- Medical Insurance

EXPERIENCE

FULL-STACK DEVELOPER
Interactive Solutions, Ohrid, North Macedonia
2023 - present

Backend development on an existing, large corporate medical insurance and disability application built with vanilla PHP.
Fullstack development on a lead generation application started from scratch.

Project highlights:

- I introduced Inertia.js to the company to enhance website development speed and performance, leveraging its ability to seamlessly integrate frontend framework Vue.js with the server-side Laravel framework, enabling the creation of a modern single-page application (SPA) without the need for a separate frontend API.
- Helped build the backend code for new patient questionnaires for the medical insurance application while working with the agile methodology.

Keywords: HTML, CSS, PHP, Laravel, MySql, Inertia.js, Vue.js, Jira, Git, Docker, Linux terminal.

FRONT-END DEVELOPER
Digital Orange, Skopje, North Macedonia
2024 – Present

Part Time work for Front-end development and maintenance on a large Dubai based project for a museum.

Project highlights:

- Implemented a new payment system using Network International (N-Genius) API alongside an existing one and enabled their toggling based on client requirement.
- Swapped recaptcha v2 with v3.
- Built new pages and improved the interface of existing ones when needed.

Keywords: : HTML, CSS, JavaScript, Vue.js, Jira, Git, Docker, Linux terminal.

FULL-STACK DEVELOPER
IceTech, Skopje, North Macedonia
January 2024 – February 2024

Part time engagement for the development of a company website.

Project highlights:

- Created a website from scratch using Nuxt.js for seamless frontend and backend integration, lighting fast single page application (SPA) experience and server side rendering which enabled better SEO for the website.

Keywords: : Nuxt.js (HTML, CSS, JavaScript, Vue.js).

FULL-STACK DEVELOPER
Moxelle, Skopje, North Macedonia
September 2021 – June 2023

Fullstack development of new projects.

Project highlights:

- Built from scratch, within a tight deadline, a fullstack voting application for an annual global beer competition where a few hundred people participate.
- Updated the frameworks, refactored the codebase for improved performance and readability and added new functionality of an existing rating tool, enabling generation of PDF files with table statistics and performance data of the competition winners and contestants.
- Developed a custom company website on a separate repo with a laravel based backend which draws data from a headless WordPress integration as a CMS.

Keywords:: HTML, CSS, Laravel, MySql, Inertia.js, Corcel, Wordpress, jQuery, Vue.js, third party APIs and libraries, Figma, Photoshop, Git, Linux terminal.

FULL-STACK DEVELOPER
Adamantus, Strumica, North Macedonia
June 2018 – September 2021

Fullstack development of new projects.

Project highlights:

- Developed websites using special markup and scripts provided by Google's Accelerated Mobile Pages (AMP), for mobile first optimization and fast loading of websites, improved SEO and Google rankings.
- Also developed desktop versions of the same sites.
- Speed up existing pages following page speed insights and other tools.
- Redesigned admin interfaces and implemented new features such as new role based authorization, payment system integration (stripe), interactive forms and other complex features for company projects.
- Improved custom CMS solution developed by the company by implementing redesign of the interface, added new functionality such as layout changing, page metadata and similar.

Keywords: HTML, CSS, AMP, jQuery, Codeigniter, MySql, Git, Photoshop, third party libraries, Linux terminal.
